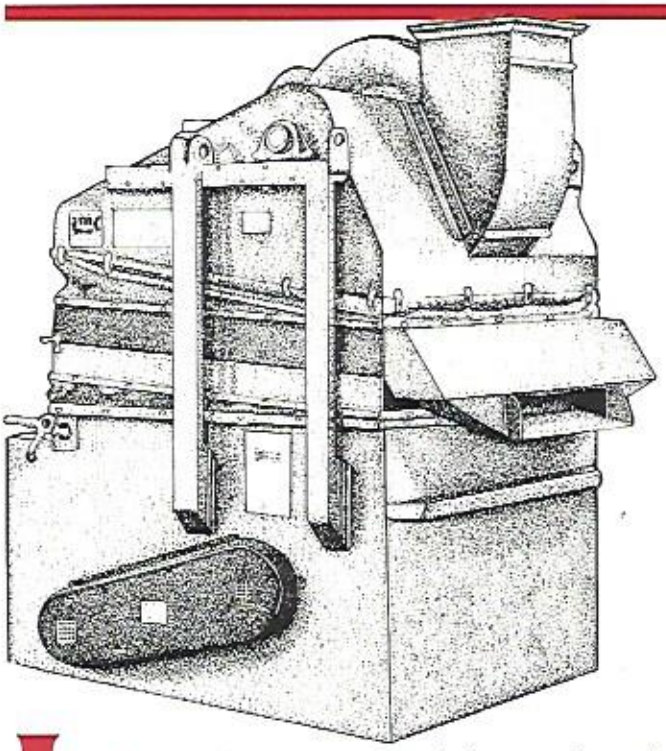
LMC STONERS



Lewis M. Carter Manufacturing can boast of fifty years experience. Around here, we jokingly say that LMC stands for "lots of major changes". In a serious light, that is what keeps us on top of this industry. We try new things, always working toward improving the quality equipment we manufacture. At LMC we constantly attempt to stay one step ahead of what our customers need, yet we are not afraid to stick with a tried and true machine. The LMC stoner is one of these models with which we have had marvelous success. They work so well and are practically indestructible. Because of this, we have not changed the basics, but added many updated features. As you know, a stoner is designed to remove a small portion of heavy or undesirable product from a large amount of light product. The separation is made by density. There are seven standard models of the LMC stoner to choose from. For increased productivity and reliability, LMC is the name you can trust.

1. USER FRIENDLY The ease of operation in an LMC stoner is matched by no other. Adjustments are very simple and can be accomplished while the machine is in operation. Most are single control adjustments.

2. VERSATILE The LMC stoner is also a very versatile unit. Several different deck configurations are available for different applications. The deck height is adjustable and multiple discharge spouts are optional. Each unit features individual automatic discharge gates. Stainless steel product contact points are also an option we offer. All models may be equipped with dust hoods and enclosed fans or random hoods with externally attached fans.

3. DURABLE Durability is of paramount importance in equipment of this kind. LMC 's stoners are practically indestructible. These stoners are constructed of heavy gauge mild steel and are completely counter balanced. We use a rippled screen, which not only gives a longer screen life, but also separates more quickly and distinctly.

4. SAFE The totally enclosed fan cooled motor insures safety. All working parts are enclosed so that little risk of injury exists from running or adjusting an LMC Stoner.

5. QUALITY From the heavy duty steel construction, to the compact, hard-working design, quality is always apparent.

6. CUSTOMIZED EXTRAS In your industry, each situation can be different and very specialized. Therefore, with these units, as with all LMC machines, nothing is carved in stone. If necessary, we will alter the machinery to your custom specifications.

THE LMC MODEL 362 STONER

The LMC model 362 is in the mid range of size for stoners that we manufacture. The unit pictured features a dust hood with an internal fan system. Random fans which are externally attached are also available. The simplicity of these units not only makes them easy to operate, but easy to maintain. With complete counter balancing and solid mild steel construction, this stoner will be around for many years to come. In this model, as with all LMC Stoners, customizing is available.

MODEL NO.	DECK WIDTH	DECK LENGTH
16	16"	24"
24	24"	34"
302	30"	38"
362	36"	46"
481	48"	62"
601	60"	78"
8096	96"	80"
